

SAVING MONEY WITH YOUR EVALUATION

Many utility companies across Illinois offer incentives and rebates to help you save money on products and projects that make your home more efficient. Through programs like Ameren's ActOnEnergy and Illinois Home Performance, an energy audit is part of the process that qualifies homeowners for sometimes significant savings on insulation and air sealing work. Our consultants are qualified through these programs to provide the data and paperwork needed for the incentives.

ABOUT

As an independent home energy consultant, we use our expertise to help you make smart and economical decisions for your home. **We DO NOT sell any products or receive financial benefit from our recommendations.** Our goal is to give you an unbiased assessment of your home and the information needed to create an improvement plan that works for you.

Our staff are certified professionals through the Building Performance Institute (www.bpi.org), an independent, nonprofit organization dedicated to standardizing procedures that consultants use in evaluating homes. The standards specified by BPI are the result of consensus-built, field driven practices developed by home retrofit professionals and current building science.

SERVICE TERRITORY

We are based out of Peoria but perform energy audits throughout Central Illinois including Peoria, Tazewell, Woodford, Marshall, Stark, Knox, Fulton, Mason, Logan and McLean counties.

We will travel beyond a 60-mile radius of Peoria for an additional fee; call for a quote.

Making lasting changes to your home for comfort, value, and efficiency!

WHAT IS IN YOUR EVALUATION?

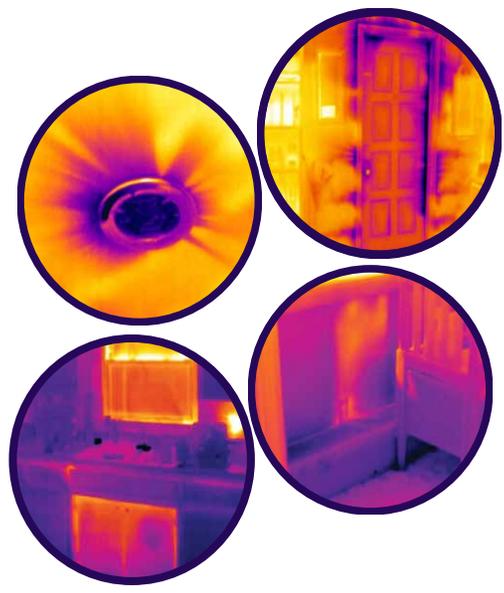

- Insulation
- Heating & Cooling
- Exhaust Fans
- Water Leaks

- Windows
- Lighting
- Appliances
- Air Leakage Testing

- Safety Inspections
- Attics & Crawlspace
- Attached Garages

INFRARED & BLOWER DOOR TESTING

Using equipment such as a blower door and thermal imaging camera is an essential way to diagnose and evaluate your home for air leakage and problems with insulation. The thermal inspection will identify areas of the home where insulation is lacking or ineffective. The blower door provides an accurate measurement of how leaky your home is and helps to locate air leakage around the home during your evaluation. These tools are part of an array of equipment consultants use to evaluate your home and provide you with the information you need to make cost effective decisions for your home.

WHAT'S IN YOUR AUDIT REPORT?

In the days after your inspection, your Energy Evaluation Report will arrive with the details you need to make strategic decisions for your home. Some of the items you will find in the report include the following:

- Cost effective solutions to improve efficiency & comfort
- Homeowner's action plan
- Digital and thermal imaging photos
- Utility bill analysis
- Guidance for contractors
- Safety test results

THE DOCTOR IS IN...

At EverGreen Home Energy Consultants, Inc., we believe that you shouldn't have to sacrifice comfort to lower your utility bills. Using building science techniques, an energy evaluation goes beyond just evaluating your home's energy use. Like calling a doctor for your house, our consultants diagnose the problems you are having in your home and present solutions that improve comfort to homeowners and durability to the home. Common ailments seen in homes are high utility bills, hot or cold sections of the home, condensation on walls and windows, mold, mildew, excess humidity, and even high levels of carbon monoxide.
